

HEP NTUA Weekly Report

10/2/2021

George Bakas

Summary

TTbar analysis:

- Created pipeline to switch to UL files
 - 2016 is divided into preVFP and post VFP
 - We handle the samples as individual measurements
 - MC Production (Signal + QCD + Subdominant) ☒
 - Training with new files ☒
 - Update the existing files with new top Tagger output ☒
 - Data production with new TopTagger ☒
 - ToDo:
 - Re-do the whole pipeline of the analysis
 - Efficiency, Acceptance, Responses
 - Mass Fit, Ryield, Contamination, Closure Tests
 - Signal Extraction
 - Unfolding
-
- Systematics
-
- Combination

Training Output 2016 preVFP and postVFP, 2017 and 2018

2016 preVFP

2017

2016 postVFP

2018
