

# Top Discriminator Efficiencies and Signal Over Bkg for several selection Categories

NTUA

---

GIANNIS PAPAKRIVOPOULOS

GEORGE BAKAS

# Overview

---

- Efficiencies vs  $m_{T\bar{T}}$  Parton
- Signal over Background for
  - Mtt samples over Bkg
  - Nominal sample over Bkg
- Yields for all samples
- All Signal over Bkg are vs  $m_{JJ}$
- Categories:
  - 1. Both jets are top tagged and b tagged
  - 2. 1 Jet top and b tagged and other jet top tagged
  - 3. 1 Jet top and b tagged and other jet b tagged
  - 4. Both jets are top tagged
  - 5. Both jets are b tagged

## Cuts:

- Reco:
  - $n_{\text{Jets}} > 1$ ,
  - $|\text{jetEta}| < 2.4$  (both jets)
  - $\text{jetPt} > 400 \text{ GeV}$  (both jets)
  - $120 \text{ GeV} < \text{jetMassSoftDrop} < 220 \text{ GeV}$  (both jets)
- Parton:
  - $|\text{etaParton}| < 2.4$  (both partons)
  - $\text{ptTopParton} > 400 \text{ GeV}$  (both partons)
  - $m_{T\bar{T}} \text{Parton} > 1000$

# Efficiency vs mTTbarParton

# Yields for Combinations of mva and b tagging

\_mva0.2\_btagLoose

Yield is extracted scaling as:

$$Hist \rightarrow Scale \left( \frac{Lumi * XS}{GenEvents} \right)$$

With Lumi = 35.9 fb<sup>-1</sup>

# Yields for Combinations of mva and b tagging

\_mva0.6\_btagLoose

\_mva0.6\_btagMedium

# Yields for Combinations of mva and b tagging

# Yields for Combinations of mva and b tagging

\_mva0.8\_btagLoose

\_mva0.8\_btagMedium

# JetMass Soft Drop for different mass windows

mass for 1

The line is located at 170 GeV to show that the mass peak is shifted to the left. (For the nominal Sample):

Mean value with no cuts: 147.509 GeV

Mean value 100-250: 154.766 GeV

Mean value 120-220: 157.318 GeV

Mean value 140-200: 161.227 GeV

hmass1\_0

For the MTT sample:

Mean value with no cuts: 147.531 GeV

Mean value 100-250: 154.693 GeV

Mean value 120-220: 157.377 GeV

Mean value 140-200: 161.126 GeV
