

HEP NTUA Weekly Report

2/2/2022

George Bakas

Summary

- ttX analysis:
 - We are writing the AN:
 1. Basic outline along with text
 2. Input all images that are needed for the analysis
 3. Appendices that include
 - Response matrices, efficiencies, acceptance, purity and stability per year
 - Fiducial Measurements per year
 - Systematic uncertainties breakdown per year
 - Closure tests
 4. Issues are handled on gitlab
- Switch to $|\cos\theta^*|$
 - Unfolded results (Parton & Particle Phase space)
 - JES uncertainties included
- Z' analysis:
 - Production for files that were missing
 - Integration of M1400 W14 for 2016_preVFP in analysis chain

Contents

1

Contents

1	Introduction	2
2	Samples	2
3	2.1 Data	2
4	2.2 Simulation	3
5	3 Trigger	9
6	4 Reconstruction and Selection	11
7	4.1 Object Reconstruction	11
8	4.2 Selection	11
9	4.3 Multivariate Discriminant	13
10	4.4 Parton level	13
11	4.5 Particle level	14
12	5 Signal Extraction	14
13	5.1 Inclusive cross section	15
14	5.2 Differential cross sections	16
15	6 Data vs Monte Carlo	30
16	7 Fiducial Measurement	37
17	8 Systematic Uncertainties	47
18	9 Combination of different years	55
19	10 Unfolded Measurement	55
20	10.1 Parton Level	55
21	10.2 Particle Level	56
22	A appendix/Fiducial	73
23		

Fit Result wrt Nominal (2016 postVFP)

Fit Result wrt Nominal (2017)

"mZ_2500_25":2000, "mZ_3000_30":2000, "mZ_3500_35":2000, "mZ_4000_40":2000, "mZ_4500_45":2000}

BACKUP

Summary

- ttX analysis Pipeline Creation
 1. We want to be able to handle all Nominal files and their variations in an automated way
 2. This requires deciding consistent naming conventions and a efficient planning
 3. Handling of:
 1. Nominal
 2. Parton Shower Weights
 3. PDF Variations
 4. JES
 5. Scale Variations
 6. bTagVariations
 7. Top quark mass variations
 4. Per year For all these we need to
 1. Create template files that have 2btag and 0btag in Extended and Reduced jetMassSoftDrop phase space
 2. 9 variables (m_{JJ} , p_{TJJ} , y_{JJ} , $jetPt[0,1]$, $jetY[0,1]$, chi , $|\cos\Theta^*|$ [0,1])
 3. Template fit files (bkg qcd, bkg subdominant) and signal templates for all variations
 4. Fit on extended signal region for all variations
 5. Response matrices, Acceptance, Efficiency
 6. Signal Extraction
 5. Combine all Fiducial Level results (4 years) into 1 Extracted Signal for all variations
 6. Unfold the combined result into **Parton & Particle** levels
 7. Show systematic variations compared to the Nominal file
 8. The same procedure must be done using different nominal files
 1. Fill in 2btag histograms in our signal region in the parton
 2. For each variation and each year
 3. Combine all years together
 4. Calculate systematics for samples other than the nominal
